

# Learning how to learn

*Elsheikh Badr*

## *E-Book Readers*

In this digital age with rapid technological development and huge production of knowledge and science, reading is a must for everybody. For those involved in education, service or research, keeping abreast of new changes through reading and other means becomes entirely inevitable.

Going hand in hand with this knowledge explosion, the ever advancing technological discoveries are providing better solutions. The advent of internet and electronic sources and tools of learning have done much to facilitate access to knowledge resources.

One recent wonderful addition is the introduction of e-book reader systems. An e-book reader is an electronic device that store and display books for reading. It presents the book in a format very similar to the real printed book. The e-book reader can store hundreds of books and other electronic sources such as journal papers. The reader is convenient, portable and lightweight. It is user-friendly with a function of adjusting the font size for three levels, small, medium and large. The e-book reader is easy to browse with a search function to locate pages and to save bookmarks. Some versions of readers provide for wireless download of electronic books and resources.

In summary, with e-book readers you can carry your library with you wherever you go!!

E-book readers are currently available from various sources and can be purchased over the internet or from bookstores. Examples include the Kindle (Amazon) and Sony e-book reader systems.
